Sallah Call Center Executive Insights

- March handled approximately 760K calls, nearly double the call volume of February and April, indicating a significant peak in customer demand.
- The Handling Rate remained above 97% across all months, demonstrating stable operational performance even during periods of increased call volume.
- Despite handling the largest call volume, March also recorded the highest Abandon Rate (2.15%), suggesting increased demand may have impacted customer waiting times.
- The call center maintained 92.28% of calls within the defined service threshold, reflecting strong SLA compliance.
- The average answer time was 9 seconds, indicating customers were connected to agents quickly and efficiently.
- Handling performance peaked on Monday (99.59%), while Saturday recorded the lowest handling rate, highlighting an opportunity to optimize workforce scheduling.
- Despite the substantial increase in calls during March, the Handling Rate remained consistently high, demonstrating effective resource management during peak periods.
